Lighting

Let our professional staff of lighting experts make your event spectacular. We offer the latest in digital and intelligent light systems to dazzle your guests. Our lighting designers and technicians will work with your band, musicians or DJ to create the atmosphere you desire. We offer a wide array of special effects including lasers, fog/haze and LED Lighting. In addition, we provide atmospheric lighting, such as uplighting and pinspotting, to highlight focal points, walls and tables.

Uplighting is a technique used in lighting design to enhance the atmosphere of any given space. Simply put, uplighting involves placing lighting instruments on the ground and focusing them upward. This method of lighting is one of the easiest ways to dress up an event space. Uplighting serves many purposes in special events. It can add color to a neutral surface, such as a wall or column. Uplighting can also be used to make the room appear taller by accenting any existing vertical lines, and creating new ones. Another function of

uplighting is to highlight any inherent architectural features of the room - columns, alcoves, etc.

Uplighting is the easiest way to transform an everyday room into a fantastic, irresistible environment, perfect for hosting an unforgettable Wedding. It can be easily tailored to any event space, as well as to specifically enhance the décor of the affair. At Masquerade DJ, we are well-versed in this technique, as it is one of our most popular lighting requests. By carefully selecting the placement and focus of our lighting instruments, we can brighten any room and give it an inviting glow, welcoming your guests inside. Our lighting designers have a knack for choosing exactly the right colors to complement everything from architecture to floral arrangements to sculpture, and more. If you want your event space to radiate elegance and sophistication, you want uplighting by Masquerade DJ.

If you want to take your wedding from ordinary to extraordinary, we can make it happen!
